Gardening on Cape Cod

FOR sixty years it has been our pleasant privilege to supply a substantial number of Cape Cod homes, both summer and year-round, with whatever horticultural requirements they may have had.

Through the years, it has been our purpose to build and maintain a complete horticultural service, combining Hardy Plant materials from our Nurseries, Annual and Bedding plants from our Greenhouses and seeds, fertilizers, insecticides, tools and gardening equipment from our Agricultural Supply Shop.

Along with these, we offer a capable Landscape Service, with ample labor forces for actual planting, grading, seeding, driveway construction and similar work on the grounds, and with trained landscape architects to advise, plan and supervise.

It has been difficult, during the war years, and too often actually impossible, for us to provide the type of service which our customers needed and desired. We knew it, and sincerely regretted it. We appreciate the patience and consideration shown by so many of our customer-friends.

The situation is now improved, but it is still not up to where all of us would like to see it. We feel that we know how to provide an eminently satisfactory Nursery and Landscape Service. With the return of men from military service and war work we should soon be able to restore that type of service.

Higher costs of labor and of materials are inevitably reflected in increased selling prices of products. It has always been our policy and aim to provide quality and reliability in materials and in workmanship. It is the necessary basis for lasting satisfaction. Our charges will be kept as moderate as possible, consistent with that policy, from which we shall not deviate.

Gardening on Cape Cod will always be a source of continuing pleasure, not only to homeowners themselves, but also to those of us who are interested in doing our best to make it successful.

About Planting in General

THREE main factors contribute largely to success with all plantings, large or small.

1. Select the kind and grade of plants most suited to the proposed location, and best fitted to fulfill the desired purposes.
2. Have the ground well prepared, before planting starts, with adequate good fertile soil to the full depth needed.
3. See that new plants especially get the best of care, from the hour you receive them, during the actual planting, and all through the first growing season particularly.

Making the right choices of kinds and quality of plants is important. If your conditions of soil and exposure are difficult, a reliable landscape consultant will save you time, money, and disappointment. Particularly in cases of severe sea-wind exposures, many kinds of plants that would be eminently successful in more sheltered spots simply cannot withstand the almost constant drying, salt-laden winds off the water. But there are kinds that will survive in such exposures. Japanese Black Pines and Rugosa Roses are two good examples. We believe that our long experience and gratifying success in sea-exposure planting enable us to give you sound and reliable advice.

Proper preparation of the ground is urgently important. Without it, long-range success and satisfaction are almost impossible. It is easy to assume that because our big hurricane-felled pines were living in "almost pure sand," new pines of fair size will thrive and grow when planted in the same sandy soil. But the large native pines started in that sand as tiny seedlings, and fought their way upward only after the roots had first gone downward far enough to supply their needs. To overcome the inevitable shock of transplanting sizable plants, we must first provide ample good soil that holds food and moisture to enable prompt "rehabilitation" of the plants in their new environment. A fair proportion of any investment in planting should go first into adequate soil preparation.

Reasonable care of new plants, large or small, is sound common sense. Yet too often it is neglected. Watering is of greatest importance. One or two thorough soakings of the ground in a week is far better than a light sprinkling daily. Trees of fair size should be securely staked to prevent swaying in the wind which tends to loosen and dry the soil, and to

break off new young feeder roots as they form. Good plants must have reasonably good care for at least the first season after planting. They deserve it all the years of their lives.

Planting Seasons

All hardy plants (except such bulbs as tulips, narcissus, etc.) are planted in this section from about April 1 on through the whole spring.

Planting of evergreens may also be done from late August through October.

Most hardy perennials may well be planted during the fall months.

Late fall planting of most deciduous trees and shrubs is very satisfactory, and promotes an early start the following spring.

Large trees, both evergreen and deciduous, are successfully transplanted with a frozen ball of earth during the winter.

Lawns

WE CARRY a complete line of only the better grades of grass seeds and fertilizers suitable for use in this area. It pays to use only first quality materials.

Lawns should be fertilized early each spring, and in some cases a second light application is advisable in early fall.

New lawn seeding can be done in early spring, but the one best time of the year is the early part of the fall.

Victory Gardening

SO SATISFYING have been the returns from home-raising of vegetables and fruits in the wartime Victory Garden Program that we are sure it will continue for many years to come. A complete line of the very best quality vegetable seeds and Victory Gardening fertilizers is offered in our shop on Depot Ave., Falmouth.

Particularly satisfactory are the thousands of sturdy vegetable plants which we raise each spring in our greenhouses and frames. Properly planted, they will give you abundant production from early summer through to late fall.

If you have not already received your copy, we will gladly send, on request, our catalogue of Victory Garden seeds, plants and fertilizers.

Hybrid Tea Roses

Roses are again scarce throughout the country. We have been fortunate in securing a very generous supply of the selected and popular varieties listed here. All our plants are top-quality, 2-year field-grown. Dormant planting before May 15 is strongly advised. For later planting we offer potted plants of the same grade and quality. If substitutions may occasionally be necessary, we will select colors as nearly like the varieties ordered as possible.

Dormant plants \$1.25 each, \$14.40 per dozen

Potted plants \$1.65 each, \$18.00 per dozen

Ami Quinard. Rich velvety maroon, fragrant.

Autumn. Burnt orange shaded red.

Betty Uprichard. Salmon-pink, copper-carmine reverse.

Landscape Service

You are invited to take full advantage of our competent Landscape Service, which combines capable labor forces for doing the actual work, trained landscape advisers for planning, advice and supervision, and a full supply of plants and gardening materials, including fertilizers, loam, manure, insecticides and tools.

Deciduous Flowering Shrubs

FLOWERING SHRUBS offer perhaps the greatest and quickest return on a small investment. Prices of good-sized shrubs are low. Plants grow quickly, provide a wealth of flower, and often most attractive fruits.

For late spring and early summer planting, shrubs in full leaf, even in flower, may be moved with a ball of earth. A small extra charge for balling and bur-lapping such plants gives added insurance of their success.

CULTIVATED HYBRID BLUEBERRIES

Used more widely every year, and deservedly so, because of their great productivity of large sweet fruits. The naturally acid soils of southeastern Massachusetts are particularly favorable for these Blueberries.

We offer the three varieties proven most satisfactory in this section, all Cape-grown:

- Cabot. The earliest to ripen.
- Pioneer. Later sort, more spreading growth.
- Rubel. The best all-purpose variety.

Information for Customers

ALL OUR STOCK is guaranteed true to name, in good condition, carefully dug and properly packed for safe shipment.

Plants are perishable, living organisms. It pays to treat them well, and success depends on correct planting methods, good soil conditions and proper after-care. Also much depends on the selection of varieties suitable for specific locations and conditions of light and wind exposure. This is especially true near the seashore, and our long experience with such problems is an added advantage of our service.

Six, or more, plants of the same variety are sold at the dozen rate. Twenty-five or more at the one-hundred rate. Although not listed in this catalogue, one-hundred rates will be granted wherever possible. All prices quoted are F.O.B. our nurseries in Falmouth. Parcel Post, express and freight charges are paid by the purchaser. Truck deliveries within a normal radius will be made without charge when they may be included on our regular delivery trips. For other truck deliveries fair charges are made, depending upon distance.

We are closed to business on Sundays.

We realize and regret that during times of war, and labor and material shortages, there have been some delays and some disappointments. With improving conditions we sincerely hope and expect to provide better service, to the utmost of our ability.

Prices are subject to change without notice. This list cancels all previous lists.
